# The Hunter Douglas Canvas Advantage

Hunter Douglas, the world leader in Window Coverings, has a world class Textile manufacturing facility in Australia.

Strong and durable, the superior Awning Canvas created by Hunter Douglas is exclusively manufactured to withstand the rigours of the most demanding Australian conditions. Hunter Douglas Canvas not only provides UV protection, is treated with **DURAGUARD®** Fabric Protector and is available in a huge range of colours and patterns for ultimate flexibility.

## **Awning Canvas Features**

- Extremely durable
- Australian Made
- Guaranteed with a 5 year warranty\*
- Easy to clean and maintain
- Extremely resistant to tearing
- · Water and stain repellent
- Colour fade resistant
- Classic and contemporary colour range

## **DURAGUARD® Fabric Protector**

**DURAGUARD®** Fabric Protector effectively repels most stain causing agents with its proven, water based, preventative, formula. This fabric protection is totally invisible and has high levels of stain repellance. It makes cleaning and maintaining the fabric much easier.

## How does DURAGUARD® work?

Hunter Douglas has a reputation for delivering the highest quality window coverings. During manufacture, Hunter Douglas fabrics are treated with **DURAGUARD®** Fabric Protector. When stain causing agents such as rainwater come into contact with the treated fabric, the water forms beads on the surface and simply rolls off the fabric.

This ensures, the canvas is more durable, easy to clean and easy to maintain. Therefore the fabric will last longer. This improved treatment delivered under the name **DURAGUARD®** Fabric Protector will provide even better performance.

## **DURAGUARD® Fabric Protector Performance**

# The benefits of choosing Hunter Douglas Canvas

## Stain Repellant & Mildew Resistant Treated to resist most

Treated to resist most known mould and fungus types.

# Shade Co-efficient Factor

An indication of the efficiency of a fabric to provide shade. The lower this figure, the more effective at providing shade.

#### **Green Underside**

Keeps the room cool whilst providing a uniform look from inside.

# High Abrasion Resistance

Fabric is less likely to rupture due to rubbing by shrubbery or overhanging branches.

### **Absorption**

Refers to percentage of solar energy (heat) absorbed by the fabric. Higher value indicates, blind absorbs more heat.

## Reflectance

Refers to the percentage of solar energy (heat) reflected by the blind. The higher the value, indicates the blind is better able to reflect heat back towards the outside environment.

## High Tensile & Tear strength

Gives fabric a high resistance to tearing.

#### Improved Opacity

The more opaque the better it is as less UV light comes inside the house.

#### **Transmission**

Refers to the amount of heat transferred through the fabric. The lower this figure, the more effective the fabric is in shielding an area from heat.

# The highest quality Australian Made canvas

# Quality Endorsed Company

Hunter Douglas Limited is a Quality Endorsed Company certified as complying with the requirements of AS/NZS ISO 9001:2008.

Perfectly suited to the harsh Australian conditions.

# **Care & Cleaning Canvas**

Hunter Douglas Awning Canvas has been manufactured from the highest quality materials. In order to ensure Hunter Douglas Awning Canvas will last, please consider the following care instructions.

- Avoid rolling up the fabric awning when wet. Roll up style awning should be retracted in rain or storm conditions. If rolled up wet, the awning should be extended and allowed to dry once the weather clears. Failure to take this action will encourage algae, mildew or other fungal growth, that will not be covered under your product warranty.
- Avoid pools of water laying on the fabric or leaving the awning extended in the rain, as failure to do so will accelerate some leaching of chemicals, reducing mould and mildew resistance.
- 3. Do not allow dirt, dust, grime, leaf litter and bird matter to remain on the fabric (as this provides a perfect medium for bacteria to proliferate). Cleaning should be carried out by light sponging with warm water and a mild natural soap. Rinse thoroughly to remove soap. Do not scrub the fabric. Hosing the fabric occasionally on a hot day is also beneficial to the appearance of the fabric as it removes dust and grime and minimises the development of algae, mildew or other fungal growth. Do not use soap powder, concentrated soaps or detergents, nor cleaning fluids. Keep insecticides, solvents and fuels away from the awning.
- 4. All fabrics should be re-coated with a water repellent treatment annually.
- 5. Occasionally extend the awning fully down to even out the material, particularly if the awning is usually set in one position.
- 6. Should mildew spots develop on the fabric, there are numerous products available at outdoor/ camping stores that can be used. Mildew removers are primarily bleach-based and manufacturer's instructions must be followed. In applying these products the following general tips are given:

- (a) Treat the awning in situ ie. as it sits fully rolled down.
- (b) Apply the solution to the fabric liberally. (A squeezy sponge mop is ideal). Care should be taken to protect gardens from the solution run off, which will kill plants it comes in contact with
- (c) A second application of mildew remover may be applied if desired. However, obstinate mildew stains may remain.
- (d) ALWAYS follow steps (a), (b) and (c) with a water proofing application.
- 7. Hunter Douglas Canvas is a product, which contains cotton. The presence of cotton knots is to be expected due to the nature of the material. In tropical Australian weather conditions some shrinkage over time is normal.
- 8. Hunter Douglas Canvas is tested for mould and mildew, which are forms of growth (ie. Living organisms). There are millions of types of these growths but the following key facts are the principal points to remember:
  - (a) Australian Standards require we test for the four most common types. These constitute 99% of known common organisms.
  - (b) Hunter Douglas tests for the 10 most common types which account for 99.99% of the known types of organisms.
